SKY66421-11: 860 to 930 MHz RF Front-End Module

Applications

- LP-WAN devices
- Internet of Things
- Smart meters
- Industrial applications
- Range extender

Features

- Integrated PA with +27 dBm output power
- Integrated receive bypass path
- Alternate TX input pin simplifies connection to any SoC
- Very low RX bypass insertion loss: 0.6 dB typical
- Single-ended 50 Ω transmit/receive RF interface
- Fast turn-on/turn-off time: < 1 μsec
- Supply voltage: 2.0 to 4.8 V
- Low gain power amplifier
- Sleep mode current: < 1 μA
- MCM (16-pin, 3.0 x 3.0 x 0.75 mm) NiPdAu plated package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

The SKY66421-11 is a high-performance, highly integrated RF front-end module designed for high-power Industrial, Scientific, Medical (ISM) band applications operating in the 860 to 930 MHz frequency range.

The SKY66421-11 is designed for ease of use and maximum flexibility with fully matched 50 Ω TX (or TX_ALT) and RX inputs and antenna outputs, and digital controls compatible with 1.6 to 3.6 V CMOS levels.

The RF blocks operate over a wide supply voltage range from 2.0 to 4.8 V allowing the SKY66421-11 to be used in battery powered applications over a wide spectrum of the battery discharge curve.

The SKY66421-11 is packaged in a 16-pin, 3.0 x 3.0 x 0.75 mm Multi-Chip Module (MCM) package.

A functional block diagram of the SKY66421-11 is provided in Figure 1. Figure 2 shows the pinout for the SKY66421-11. Table 1 lists the pin assignments and signal descriptions.

7	N/C	Not connected internally to the device	16	VCC1	Positive power supply
8	N/C	Not connected internally to the device	Paddle	GND	Exposed die paddle; electrical and thermal ground (connect to PCB ground)
9	ANT	Connect to 50 Ω antenna filter			

Electrical and Mechanical Specifications

Table 2 provides the absolute maximum ratings, and Table 3 shows the recommended operating conditions. Electrical specifications are provided in Tables 4 through 6.

The state of the SKY66421-11 is determined by the control logic shown in Tables 7 and 8.

Table 2. SKY66421-11 Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage on VCC0 (no RF)	V _{CC0}	-0.3	5.5	V
Supply voltage on VCC1 and VCC2 (no RF)	V _{CC12}	-0.3	5.5	V

Rx input power at ANT port	P _{IN_RX_MAX}		+10	dBm
Electrostatic discharge: Human Body Model (HBM), Class 1C	ESD		1000	V

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: *Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.*

Evaluation Board Description

The SKY66421-11-EK1 Evaluation Board is designed to demonstrate the performance of the SKY66421-11 RF Front-End Module. It is optimized for evaluation, experimentation, and investigation, using CW (continuous wave) signals.

Figure 3 shows the Evaluation Board. The Evaluation Board schematic diagram for 915 MHz application (EK1) is provided in Figure 4. The Bill of Materials (BOM) for the SKY66421-11 Evaluation Board for 915 MHz application (EK1) is listed in Table 9.

The Evaluation Board schematic diagram for 868 MHz (EK3) is provided in Figure 5. The Bill of Materials (BOM) for the SKY66423-11 Evaluation Board for 868 MHz application (EK3) is listed in Table 10.

Package Dimensions

The layout footprint for the SKY66421-11 is provided in Figure 6. Typical part markings are shown in Figure 7. Package dimensions for the SKY66421-11 are shown in Figure 8, and tape and reel dimensions are provided in Figure 9.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY66421-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

NOTE: THERMAL VIAS SHOULD BE RESIN FILLED AND CAPPED IN ACCORDANCE WITH IPC-4761 TYPE VII VIAS. 30-35UM Cu THICKNESS IS RECOMMENDED.
