Description

The SKY96504-11 is a low-band single-pole, six-throw (SP6T) and a high-band single-pole, eight-throw (SP8T) antenna switch module with integrated filters and a Mobile Industry Processor Interface (MIPI), Version 2.0. Receive filters for bands 8, 26, 3, 39, 1, 34, 41, 40, and 7 are integrated into the module.

Using advanced switching technologies, the SKY96504-11 maintains low insertion loss and high isolation for receive switching paths. The high-linearity performance and low insertion loss achieved by the SKY96504-11 makes it an ideal choice for UMTS, CDMA2000, and LTE applications.

Switching is controlled by an integrated MIPI interface. Depending on the logic applied to the decoder, the antenna pin is connected to up to 2 of 13 switched RF ports using a low insertion loss path, while the paths between the antenna pin and the other RF pins are in a high isolation state. No external DC blocking capacitors are required on the RF paths.

The SKY96504-11 is manufactured in a compact, 3.5 x 3.0 x 0.65 mm, 24-pin surface-mount Quad Flat No-Lead (QFN) package.

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to Skyworks Definition of Green™, document number SQ04–0074.
