# SKY12233-11: High IIP3 2.1 to 3.1 GHz Voltage-Controlled Variable Attenuator

Applications

- Automatic power leveling/gain control circuits in cellular base stations and point-to-point radio IF chains
- General wireless systems including WiMAX, LTE, WCDMA, VSAT, and military communications

Features

- 2.1 to 3.1 GHz broadband operating range
- Maximum attenuation value: 34 dB
- Control voltage range: 0 to 5 V
- High IIP3: +61 dBm
- Low current consumption: <2 mA @ maximum attenuation
- Small, MCM (8-pin, 4.9 x 3.2 mm) package (MSL3, 260 °C per JEDEC J-STD-020)
- For RoHS and other product compliance information, see the Skyworks Certificate of Conformance
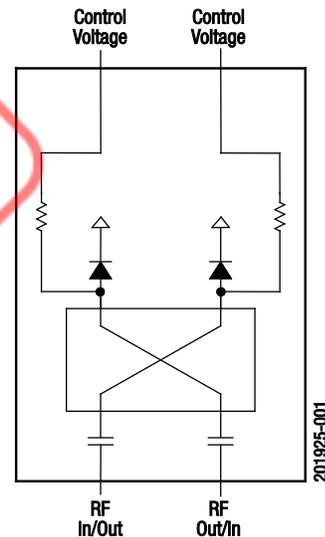

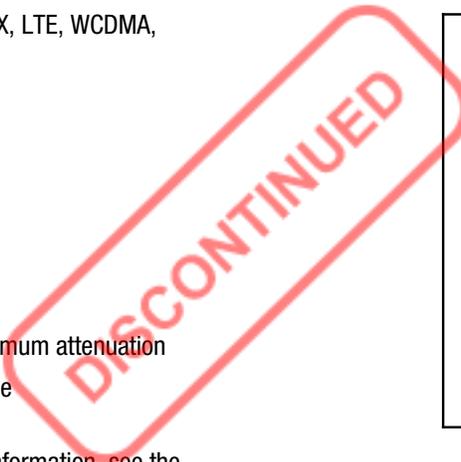

Figure 1. SKY12233-11 Block Diagram

Description

The SKY12233-11 is a voltage-controlled variable attenuator from Skyworks series of high third order input intercept point (IIP3) components. The device has been designed to operate over the 2.1 to 3.1 GHz frequency band, but is specifically optimized for use as a wide dynamic range, low distortion attenuator, centered at 2.60 GHz.

The SKY12233-11 provides monotonic attenuation performance over its entire control voltage range. This attenuator is comprised of a pair of matched PIN diodes that terminate two ports of its internal 90-degree hybrid coupler. The diodes are biased using an external control voltage signal. The attenuator requires no external components. It operates with a control voltage range of 0 to 5 V and a 1.7 mA typical control current at maximum attenuation.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Table 1. SKY12233-11 Signal Descriptions

Pin	Name	Description	Pin	Name	Description
1	GND	Ground. Must be connected to PCB ground using lowest possible inductance path.	5	GND	Ground. Must be connected to PCB ground using lowest possible inductance path.
2	V_CONTROL	Control voltage input (voltage applied is nominally equal to the voltage applied to pin 4)	6	J1	RF input/output
3	GND	Ground. Must be connected to PCB ground using lowest possible inductance path.	7	GND	Ground. Must be connected to PCB ground using lowest possible inductance path.
4	V_CONTROL	Control voltage input (voltage applied is nominally equal to the voltage applied to pin 2)	8	J2	RF output/input

Technical Description

The SKY12233-11 is a 50 Ω matched voltage controlled variable attenuator with monotonic attenuation performance from 2.1 to 3.1 GHz over its entire control voltage range. This attenuator requires no external biasing or RF matching components.

Monotonic performance means the attenuation increases as the applied DC voltage increases. This attenuator is comprised of a pair of matched PIN diodes that terminate two ports of an internal 90-degree hybrid coupler.

The diodes are biased using an external control voltage signal that sets the bias current through a resistive network. The attenuator operates with a control voltage range of 0 to 5 V and a 1.7 mA typical control current at maximum attenuation. As the control voltage increases, the bias current through each of the PIN diodes also increases. This increased bias current lowers the resistance of the PIN diodes. Maximum attenuation occurs when the resistance of the PIN diodes equals the characteristic impedance of the hybrid coupler ports, which they terminate. This occurs at a control voltage of approximately 5 VDC.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY12233-11 are provided in Table 2. Electrical specifications are provided in Table 3.

Performance characteristics for the SKY12233-11 are illustrated in Figures 3 through 8.

Table 2. SKY12233-11 Absolute Maximum Ratings[1]

Parameter	Symbol	Minimum	Maximum	Units
Control voltage	VCONTROL		10	V
RF input power (CW)	PIN		4	W
Control current	ICC		50	mA
Diode reverse bias voltage			50	V
Storage temperature	TSTG	−40	+85	°C
Operating temperature	TOP	−40	+85	°C

Electrostatic discharge:
 	
    Charged Device Model (CDM), Class 3
    Human Body Model (HBM), Class 1A
    Machine Model (MM), Class A
	ESD		
			
			500

				V

[1] Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: *Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.*

Table 3. SKY12233-11 Electrical Specifications[1]
(TOP = +25 °C, VCONTROL = 0 to 5 V, PIN = 0 dBm, Characteristic Impedance [Z0] = 50 Ω, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Attenuation	Attn	VCONTROL = 5 V, f = 2.6 GHz	25	34		dB
Control current	ICC	VCONTROL = 5 V		1.7		mA
Insertion loss	IL	VCONTROL = 0 V, f = 2.1 to 3.1 GHz		1.5	2.5	dB
Return loss	RL	VCONTROL = 0 V, f = 2.1 to 3.1 GHz	7	20		dB
Third order input intercept point[2]	IIP3	PIN = +8 dBm each tone, VCONTROL = 0 V, f1 = 2.600 GHz, f2 = 2.610 GHz		+61		dBm

[1] Performance is guaranteed only under the conditions listed in this table.

[2] Minimum specification is guaranteed by design and is not 100% production tested.

Typical Performance Characteristics

(T_{OP} = +25 °C, $V_{CONTROL}$ = 0 to 5 V, P_{IN} = 0 dBm, Characteristic Impedance [Z_0] = 50 Ω, J1 = Input Port, J2 = Output Port, Unless Otherwise Noted)

Evaluation Board Description

The SKY12233-11 Evaluation Board is used to test the performance of the SKY12233-11 variable attenuator. An assembly drawing for the Evaluation Board is shown in Figure 9. The Evaluation Board layer detail is shown in Figure 10.

The attenuation level of the SKY12233-11 is controlled by applying 0 to 5 V to the V_CONTROL pins.

Package Dimensions

The PCB layout footprint for the SKY12233-11 is shown in Figure 11. Typical part markings are shown in Figure 12. Package dimensions are shown in Figure 13, and tape and reel dimensions are provided in Figure 14.

Package and Handling Information

Since this device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY12233-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design & SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
