

# **PIN-PROGRAMMABLE PRECISION CLOCK MULTIPLIER**

#### **Features**

- Not recommended for new designs. For alternatives, see the Si533x family of products.
- Selectable output frequencies ranging from 19.44 to 1050 MHz
- Low jitter clock outputs with jitter 
   LOS alarm output generation as low as 0.6 ps<sub>RMS</sub> ■ Pin-programmable settings (50 kHz-80 MHz)
- Integrated loop filter with selectable loop bandwidth (150 kHz to 1.3 MHz)
- Dual clock inputs with manual or automatically controlled switching

- Dual clock outputs with selectable signal format: LVPECL, LVDS, CML, CMOS
- Support for ITU G.709 FEC ratios (255/238, 255/237, 255/236)

- On-chip voltage regulator for 1.8 V ±5%, 2.5 or 3.3 V ±10% operation
- Small size: 6 x 6 mm 36-lead QFN
- Pb-free, RoHS compliant

# **Applications**

- SONET/SDH OC-48/STM-16 and OC-192/STM-64 line cards 
  Optical modules
- ITU G.709 line cards

  - GbE/10GbE, 1/2/4/8/10GFC line Test and measurement cards

#### Description

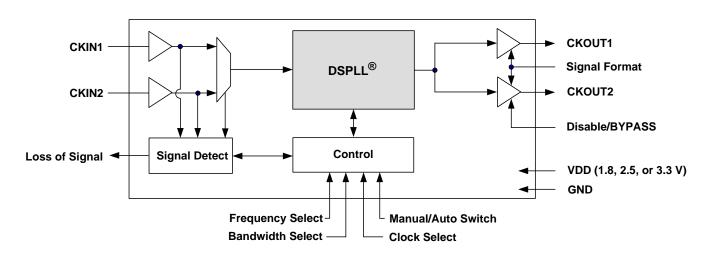

The Si5322 is a low jitter, precision clock multiplier for high-speed communication systems, including SONET OC-48/OC-192, Ethernet, and Fibre Channel. The Si5322 accepts dual clock inputs ranging from 19.44 to 707 MHz and generates two equal frequency-multiplied clock outputs ranging from 19.44 to 1050 MHz. The input clock frequency and clock multiplication ratio are selectable from a table of popular SONET, Ethernet, and Fibre Channel rates.

The Si5322 is based on Skyworks Solutions' 3rd-generation DSPLL® technology, which provides any-frequency synthesis in a highly-integrated PLL solution that eliminates the need for external VCXO and loop filter components. The DSPLL loop bandwidth is digitally programmable, providing jitter performance optimization at the application level.

Operating from a single 1.8, 2.5, or 3.3 V supply, the Si5322 is ideal for providing clock multiplication in high performance timing applications.

Notes:

**1.** LVPECL outputs require nominal  $V_{DD} \ge 2.5$  V.

2. No overshoot or undershoot.

**3.** This is the amount of leakage that the 3L inputs can tolerate from an external driver. See Figure 3 on page 9. In most designs, an external resistor voltage divider is recommended.

### 1.1. Three-Level (3L) Input Pins (No External Resistors)

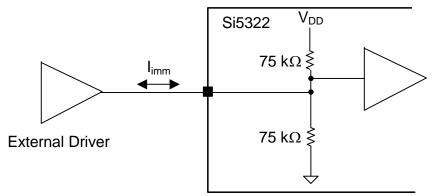

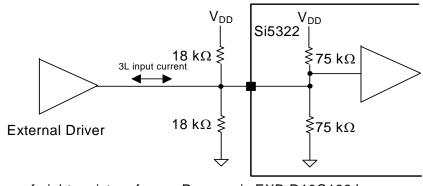

Figure 3. Three-Level Input Pins

### **1.2.** Three-Level Input Pins (Example with External Resistors)

One of eight resistors from a Panasonic EXB-D10C183J (or similar) resistor pack

#### Figure 4. Three-Level Input Pins

### Table 4. Three-Level Input Pins<sup>1,2,3,4</sup>

Parameter	Min	Max
Input Low Current	–30 μA	—
Input Mid Current	–11 μA	–11 μA
Input High Current	_	–30 μA

Notes:

1. The current parameters are the amount of leakage that the 3L inputs can tolerate from an external driver using the external resistor values indicated in this example. In most designs, an external resistor voltage divider is recommended.

2. Resistor packs are only needed if the leakage current of the external driver exceeds the current specified in Table 2, limm. Any resistor pack may be used (e.g., Panasonic EXB-D10C183J). PCB layout is not critical.

- 3. If a pin is tied to ground or  $V_{DD}$ , no resistors are needed.
- 4. If a pin is left open (no connect), no resistors are needed.

9

# Table 5. Performance Specifications<sup>1, 2, 3, 4</sup>

# 2. Functional Description

The Si5322 is a low jitter, precision clock multiplier for high-speed communication systems, including SONET OC-48/OC-192, SDH STM-16/64 Ethernet, and Fibre Channel. The Si5322 accepts dual clock inputs ranging from 19.44 to 707 MHz and generates two frequencymultiplied clock outputs ranging from 19.44 to 1050 MHz. The two input clocks are at the same frequency and the two output clocks are at the same frequency.

The input clock frequency and clock multiplication ratio are selectable from a table of popular SONET, Ethernet, and Fibre Channel rates. In addition to providing clock multiplication in SONET and datacom applications, the Si5322 supports SONET-to-datacom frequency translations.

Skyworks Solutions offers a PC-based software utility, DSPLL*sim*, that can be used to look up valid Si5322 frequency translations. This utility can be downloaded from https://www.skyworksinc.com/en/Products/Timing.

The Si5322 is recommended for applications in which the input clock is relatively low jitter and only clock multiplication is required. The Si5322 is based on Skyworks Solutions' 3rd-generation DSPLL<sup>®</sup> technology, which provides any-frequency synthesis in a highly integrated PLL solution that eliminates the need for external VCXO and loop filter components. The Si5322 PLL loop bandwidth is selectable via the BWSEL[1:0] pins and supports a range from 150 kHz to 1.5 MHz. The DSPLLsim software utility can be used to calculate valid loop bandwidth settings for a given input clock frequency/clock multiplication ratio. The Si5322 monitors all input clocks for loss of signal and provides a LOS alarm when it detects a missing clock.

In the case when the input clocks enter alarm conditions, the PLL will freeze the DCO output frequency near its last value to maintain operation with an internal state close to the last valid operating state.

The Si5322 has two differential clock outputs. The electrical format of the clock outputs is programmable to support LVPECL, LVDS, CML, or CMOS loads. If not required, the second clock output can be powered down to minimize power consumption. For system-level debugging, a bypass mode is available which drives the output clock directly from the input clock, bypassing the internal DSPLL. The device is powered by a single 1.8, 2.5, or 3.3 V supply.

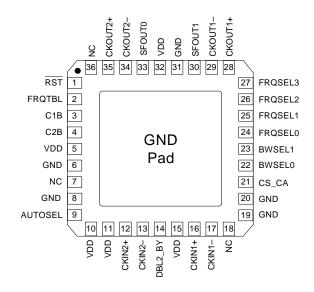

#### **2.1. Further Documentation**

Consult the Skyworks Solutions Any-Frequency Precision Clock Family Reference Manual (FRM) for detailed information about the Si5322. Additional design support is available from Skyworks Solutions through your distributor.

Skyworks Solutions has developed a PC-based software utility called DSPLL*sim* to simplify device configuration, including frequency planning and loop bandwidth selection.

The FRM and this utility can be downloaded from https://www.skyworksinc.com/en/Products/Timing.

# 3. Pin Descriptions: Si5322

#### Table 9. Si5322 Pin Descriptions

Pin #	Pin Name	I/O	Signal Level	Description
1	RST	I	LVCMOS	<b>External Reset.</b> Active low input that performs external hardware reset of device. Resets all internal logic to a known state. <u>Clock</u> outputs are tristated during reset. After rising edge of RST signal, the Si5322 will perform an internal self-calibration. This pin has a weak pull-up.
2	FRQTBL	I	3-Level	Frequency Table Select. Selects SONET/SDH, datacom, or SONET/SDH to datacom frequency table. L = SONET/SDH. M = Datacom. H = SONET/SDH to Datacom. The pin has a weak pull-up and weak pull-down and defaults to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.
3	C1B	0	LVCMOS	<ul> <li>CKIN1 Loss of Signal.</li> <li>Active high loss-of-signal indicator for CKIN1. Once triggered, the alarm will remain active until CKIN1 is validated.</li> <li>0 = CKIN1 present.</li> <li>1 = LOS on CKIN1.</li> </ul>
4	C2B	0	LVCMOS	<ul> <li>CKIN2 Loss of Signal.</li> <li>Active high loss-of-signal indicator for CKIN2. Once triggered, the alarm will remain active until CKIN2 is validated.</li> <li>0 = CKIN2 present.</li> <li>1 = LOS on CKIN2.</li> </ul>

Pin #	Pin Name	I/O	Signal Level	Description
5, 10, 11, 15, 32	V <sub>DD</sub>	V <sub>DD</sub>	Supply	$\label{eq:supply} \begin{array}{l} \textbf{Supply.} \\ The device operates from a 1.8, 2.5, or 3.3 V supply. Bypass capacitors should be associated with the following V_{DD} pins: \\ 5 & 0.1 \ \mu F \\ 10 & 0.1 \ \mu F \\ 32 & 0.1 \ \mu F \\ A 1.0 \ \mu F \ should be placed as close to device as is practical. \end{array}$
6, 8,19, 20, 31	GND	GND	Supply	<b>Ground.</b> Must be connected to system ground. Minimize the ground path impedance for optimal performance of this device.
9	AUTOSEL	1	3-Level	<ul> <li>Manual/Automatic Clock Selection.</li> <li>Three level input that selects the method of input clock selection to be used.</li> <li>L = Manual.</li> <li>M = Automatic non-revertive.</li> <li>H = Automatic revertive.</li> <li>The pin has a weak pull-up and weak pull-down and defaults to M.</li> <li>Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.</li> </ul>
12 13	CKIN2+ CKIN2–	I	Multi	<b>Clock Input 2.</b> Differential input clock. This input can also be driven with a single-ended signal. Input frequency selected from a table of values. The same frequency must be applied to CKIN1 and CKIN2.
14	DBL2_BY	I	3-Level	Output 2 Disable/Bypass Mode Control. Controls enable of CKOUT2 divider/output buffer path and PLL bypass mode. L = CKOUT2 enabled. M = CKOUT2 disabled. H = Bypass mode with CKOUT2 enabled. CMOS outputs do not support Bypass Mode. The pin has a weak pull-up and weak pull-down and defaults to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.
16 17	CKIN1+ CKIN1–	I	Multi	<b>Clock Input 1.</b> Differential input clock. This input can also be driven with a single-ended signal. Input frequency selected from a table of values. The same frequency must be applied to CKIN1 and CKIN2.

### Table 9. Si5322 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Level	Description
21	CS_CA	I/O	LVCMOS	<ul> <li>Input Clock Select/Active Clock Indicator.</li> <li>Input: If manual clock selection mode is chosen (AUTOSEL = L), this pin functions as the manual input clock selector. This input is internally deglitched to prevent inadvertent clock switching during changes in the CS input state.</li> <li>0 = Select CKIN1.</li> <li>1 = Select CKIN2.</li> <li>If configured as input, must be set high or low.</li> <li>Output: If automatic clock selection mode is chosen (AUTOSEL = M or H), this pin indicates which of the two input clocks is currently the active clock. If alarms exist on both CKIN1 and CKIN2, indicating that the digital hold state has been entered, CA will indicate the last active clock that was used before entering the hold state.</li> <li>0 = CKIN1 active input clock.</li> <li>1 = CKIN2 active input clock.</li> </ul>
23 22	BWSEL1 BWSEL0	I	Bandwidth Select.Three level inputs that select the DSPLL closed lood width. Detailed operations and timing characteristic these pins may be found in the Any-Frequency Pre- Clock Family Reference Manual.3-LevelClock Family Reference Manual. These pins have both weak pull-ups and weak pull and default to M. Some designs may require an external resistor vol divider when driven by an active device that will tri	
27 26 25 24	FRQSEL3 FRQSEL2 FRQSEL1 FRQSEL0	I	3-Level	Multiplier Select. Three level inputs that select the input clock and clock multi- plication ratio, depending on the FRQTBL setting. Consult the Any-Frequency Precision Clock Family Refer- ence Manual or DSPLL <i>sim</i> configuration software for set- tings, both available for download at https://www.skyworksinc.com/en/Products/Timing These pins have both weak pull-ups and weak pull-downs and default to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.

#### Notes:

- 1. All dimensions shown are in millimeters (mm) unless otherwise noted.
- 2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
- 3. This drawing conforms to JEDEC outline MO-220, variation VJJD.
- 4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020C specification for Small Body Components.

# 6. Land Pattern: 36-Pin QFN

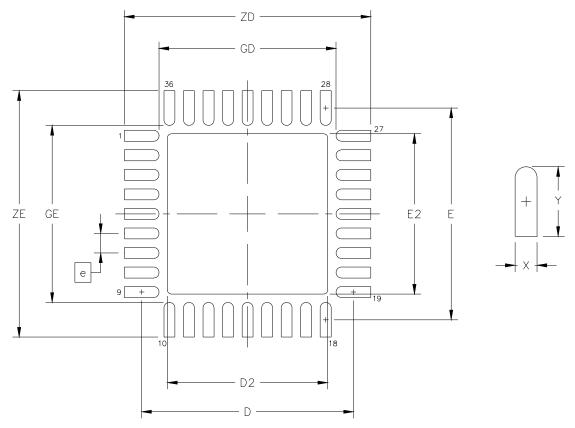

Figure 8. 36-Pin QFN Land Pattern

<sup>20</sup> Skyworks Solutions, Inc. • Phone [781] 376-3000 • Fax [781] 376-3100 • sales@skyworksinc.com • www.skyworksinc.com Rev. 1.0 • Skyworks Proprietary Information • Products and Product Information are Subject to Change Without Notice • October 29, 2021

#### Table 11. PCB Land Pattern Dimensions

Dimension	MIN	MAX
e	0.50	BSC.
E	5.42	REF.
D	5.42	REF.
E2	4.00	4.20
D2	4.00	4.20
GE	4.53	_
GD	4.53	_
Х	_	0.28
Y	0.89	REF.
ZE	-	6.31
ZD	—	6.31

#### Notes:

General

- 1. All dimensions shown are in millimeters (mm) unless otherwise noted.
- **2.** Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
- 3. This Land Pattern Design is based on IPC-SM-782 guidelines.
- **4.** All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

#### Solder Mask Design

 All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 µm minimum, all the way around the pad.

#### Stencil Design

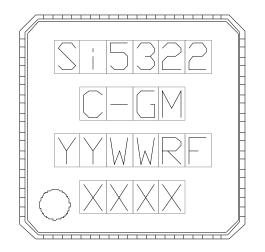

- **6.** A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
- 7. The stencil thickness should be 0.125 mm (5 mils).
- **8.** The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads.
- **9.** A 4 x 4 array of 0.80 mm square openings on 1.05 mm pitch should be used for the center ground pad.

#### Card Assembly

- **10.** A No-Clean, Type-3 solder paste is recommended.
- **11.** The recommended card reflow profile is per the JEDEC/IPC J-STD-020C specification for Small Body Components.

# 7. Top Marking

## 7.1. Si5322 Top Marking (QFN)

### 7.2. Top Marking Explanation

Mark Method:	Laser	
Font Size:	0.80 mm Right-Justified	
Line 1 Marking:	Si5322	Customer Part Number See Ordering Guide for options
Line 2 Marking:	C-GM	C = Product Revision G = Temperature Range –40 to 85 °C (RoHS6) M = QFN Package
Line 3 Marking:	YYWWRF	YY = Year WW = Work Week R = Die Revision F = Internal code Assigned by the Assembly House. Corresponds to the year and work week of the mold date.
Line 4 Marking:	Pin 1 Identifier	Circle = 0.75 mm Diameter Lower-Left Justified
	XXXX	Internal Code

# **DOCUMENT CHANGE LIST**

### **Revision 0.44 to Revision 0.45**

Condensed format.

### Revision 0.45 to Revision 0.46

- Removed references to latency control, INC, and DEC in figures and text.
- Changed LVTTL to LVCMOS in Table 2, "Absolute Maximum Ratings," on page 5.
- Added Figure 1, "Typical Phase Noise Plot," on page 4.
- Updated "3. Pin Descriptions: Si5322".
- Added "6. Land Pattern: 36-Pin QFN".

### Revision 0.46 to Revision 0.47

- Removed Figure 1. "Typical Phase Noise Plot."
- Changed pins 11 and 15 from NC to VDD in "3. Pin Descriptions: Si5322".

### **Revision 0.47 to Revision 0.5**

- Changed 1.8 V operating range to ±5%.
- Updated Table 1 on page 4.
- Updated Table 2 on page 5.
- Updated Figure 6 on page 12 to add pull-up/pulldown resistors for 3-level inputs.
- Added figure and table on page 11.
- Updated "2. Functional Description" on page 13.
- Clarified "3. Pin Descriptions: Si5322" on page 14.
- Updated SFOUT values.

### **Revision 0.5 to Revision 0.51**

- Changed "any-rate" to "any-frequency" throughout.
- Expanded spec tables 1 through 7.
- Updated Table 5 on page 10.
- Added "7. Top Marking" on page 22.
- Added clarification that CMOS output format is not available in PLL bypass mode.
- Updated "4. Ordering Guide" on page 18.
- Removed note from "3. Pin Descriptions: Si5322" on page 14.

### **Revision 0.51 to Revision 1.0**

- Updated logo.
- Transitioned to full production.
